

**The Xtreme System:
Cost-effective drying at 40°C or 20°C.**

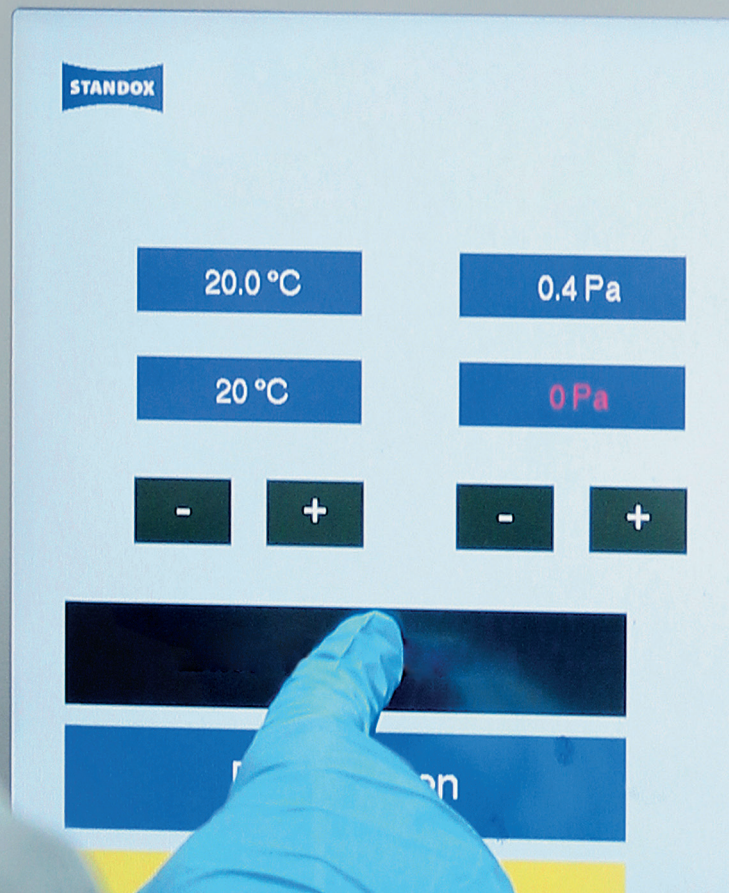

An Axalta Coating Systems Brand

The Art of Refinishing.

Xtreme energy efficient.

Depending on your current workload, your shop can choose between significantly lower energy consumption or quicker booth throughput. Which pays off in increased efficiency.

1. Xtreme advanced.

The Xtreme System is the only product on the market that allows for drying at any temperature.

2. Xtreme flexible.

You can complete the entire drying process at 60°C, 40°C, or even at 20°C, without forced drying. That reduces energy costs by up to 70%, which makes it unbelievably efficient.

3. Xtreme adaptable.

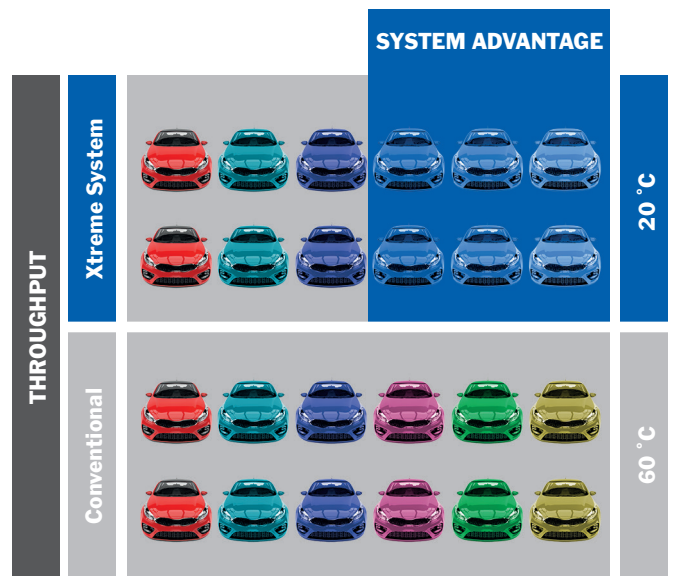

For lower job volumes, the booth can be continuously set at 40°C to 20°C for drying. That consistently reduces energy costs.

4. Xtreme E-car friendly.

Drying at lower temperatures is the gentle way to refinish cars, making it an ideal solution for electric or hybrid cars with sensitive electronics.

5. Xtreme easy on tyres.

For certain models of vehicles, regulations require that tyres be removed prior to painting owing to their sensitivity to heat. That requirement doesn't apply to drying temperatures of 40°C - 20°C, which saves you time.

The Xtreme System: the same throughput with significantly lower energy costs.
